EXPERIENCE

09/22-Present

Penta - Software Engineer, Brookfield, WI (Remote)

- Implemented a testing framework for the payroll solution software, resulting in a 25% decrease in testing time and a 50% decrease in bug reports.
- Collaborated with a cross-functional development team to deliver front-end bug fixes and feature releases on a daily basis.
- Conducted security assessments on the payroll solution software and identified existing vulnerabilities in the framework, resulting in the development of a comprehensive security plan.
- Collaborated with the product team to define and prioritize product requirements, and participated in regular sprint planning meetings to ensure that all deliverables were completed on time and within budget.

10/21-09/22

Cyberjin - Software Engineer, Tampa, FL

- Worked with UX/UI designers, machine Learning scientists, and survey feedback in order to find the optimal solution for automating candidate-company matches through the use of machine learning models. Successfully released feature at launch, which saw an 85% placement rate of the top 3 recommended candidates, amounting to over \$500,000 in revenue, and building customer confidence in product.
- Responsible for end-to-end application development including database, business logic layer and front-end design and development of 7 figure revenue generating SAAS platform, bringing product to MVP in 6 months.
- Designed and implemented new API strategy, migrating 10,000+ points of data from old CMS system into internal NoSQL database.

08/21-09/21

Tumble - Software Engineer (Contract), San Francisco, CA

- Developed and delivered onboarding micro application utilized immediately by client to onboard new customers, serving as the initial technology tool that client's customers would experience as part of a larger business relationship.
 - Improved application with micro service billing service to enable customers to manage their subscriptions using Serverless framework, Python, and Django.
-
